# PROJECTS ARE EVOLVING. SO ARE SUPPLIER REQUIREMENTS.

## MARKET TREND

**The U.S.** construction market is increasingly driven by residential renovation, remodeling and electrical system upgrades, supported by an aging housing stock and evolving electrical codes and safety requirements. This is driving demand for higher-performance wiring devices that enhance safety, functionality and installation efficiency.

**Latin America's** construction market is expanding through new residential developments and a growing mix of hospitality, commercial and infrastructure projects. As new construction adopts more modern electrical systems and building technologies, demand is increasing for wiring devices that support safety, connectivity, convenience and system functionality.

### How ELEGRP Delivers

#### QUALITY

Every product undergoes rigorous quality inspection before leaving our facilities, helping ensure consistent performance and reliability.

#### COMPLIANCE

UL, NOM and other applicable certifications help ensure our products are ready to meet market and project requirements.

#### SOLUTIONS

From GFCI and USB charging to lighting controls, we offer a comprehensive portfolio to meet diverse project needs.

#### SUPPLY

With warehouse support in Florida, we help provide faster, more responsive supply for projects across Latin American.

As projects become more complex, customers expect more than price and product availability.

They need reliable quality, complete solutions, project-ready compliance, and dependable supply from a trusted partner.

# Home Office

## Pain Point

Low on laptop battery and need to charge multiple devices at once? Traditional outlets offer limited charging power and require bulky adapters. Upgrade to 65W fast charging built right into the wall, so you can power your laptop and other devices faster and keep your work moving.

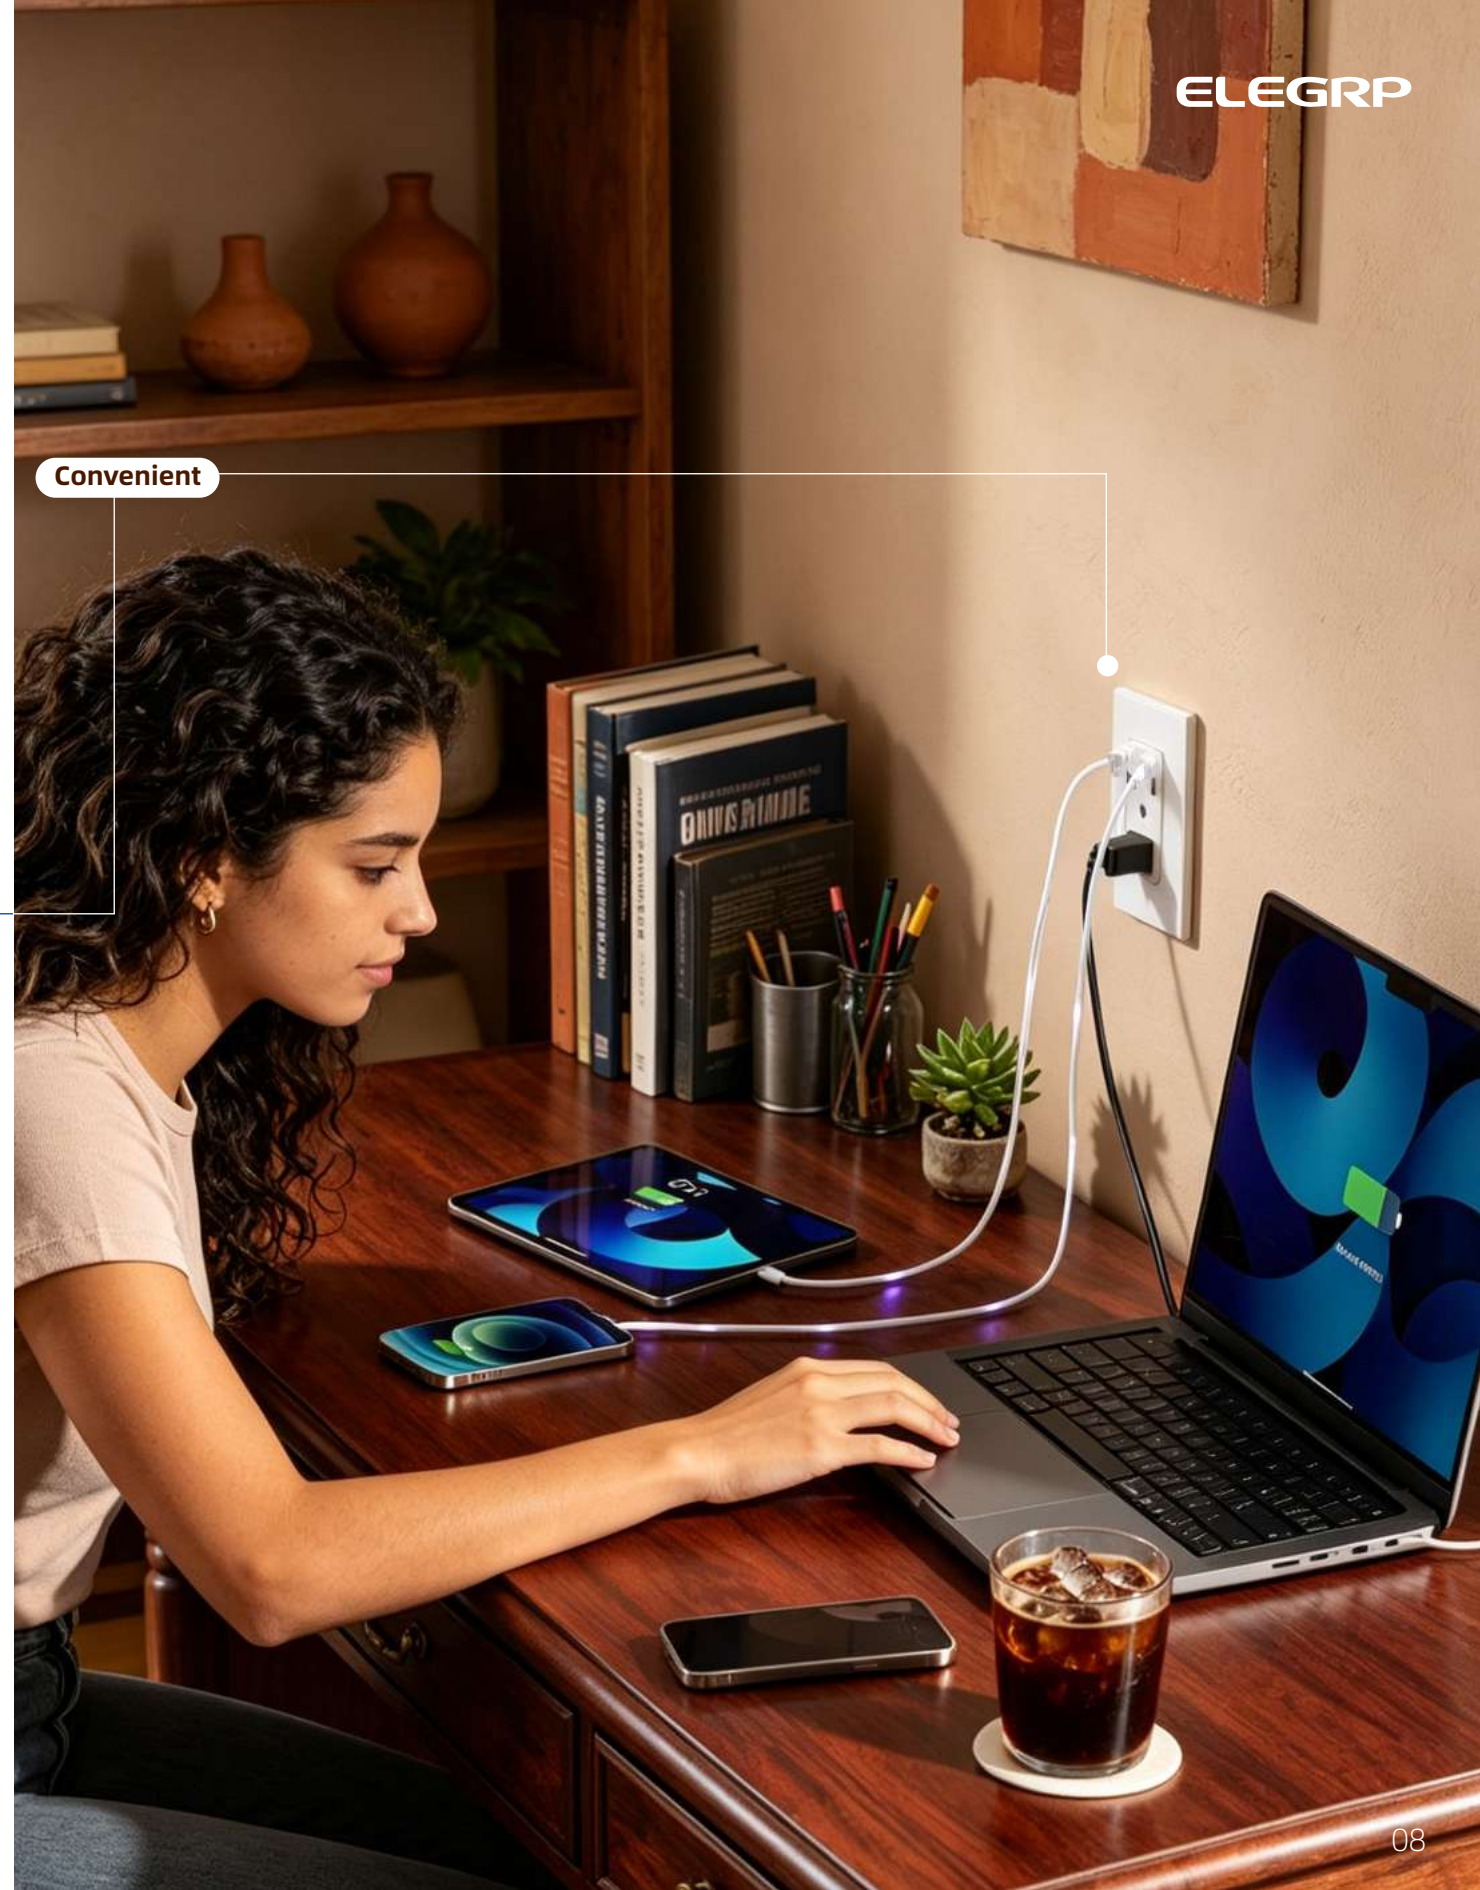

## Solution

### 65W USB outlet

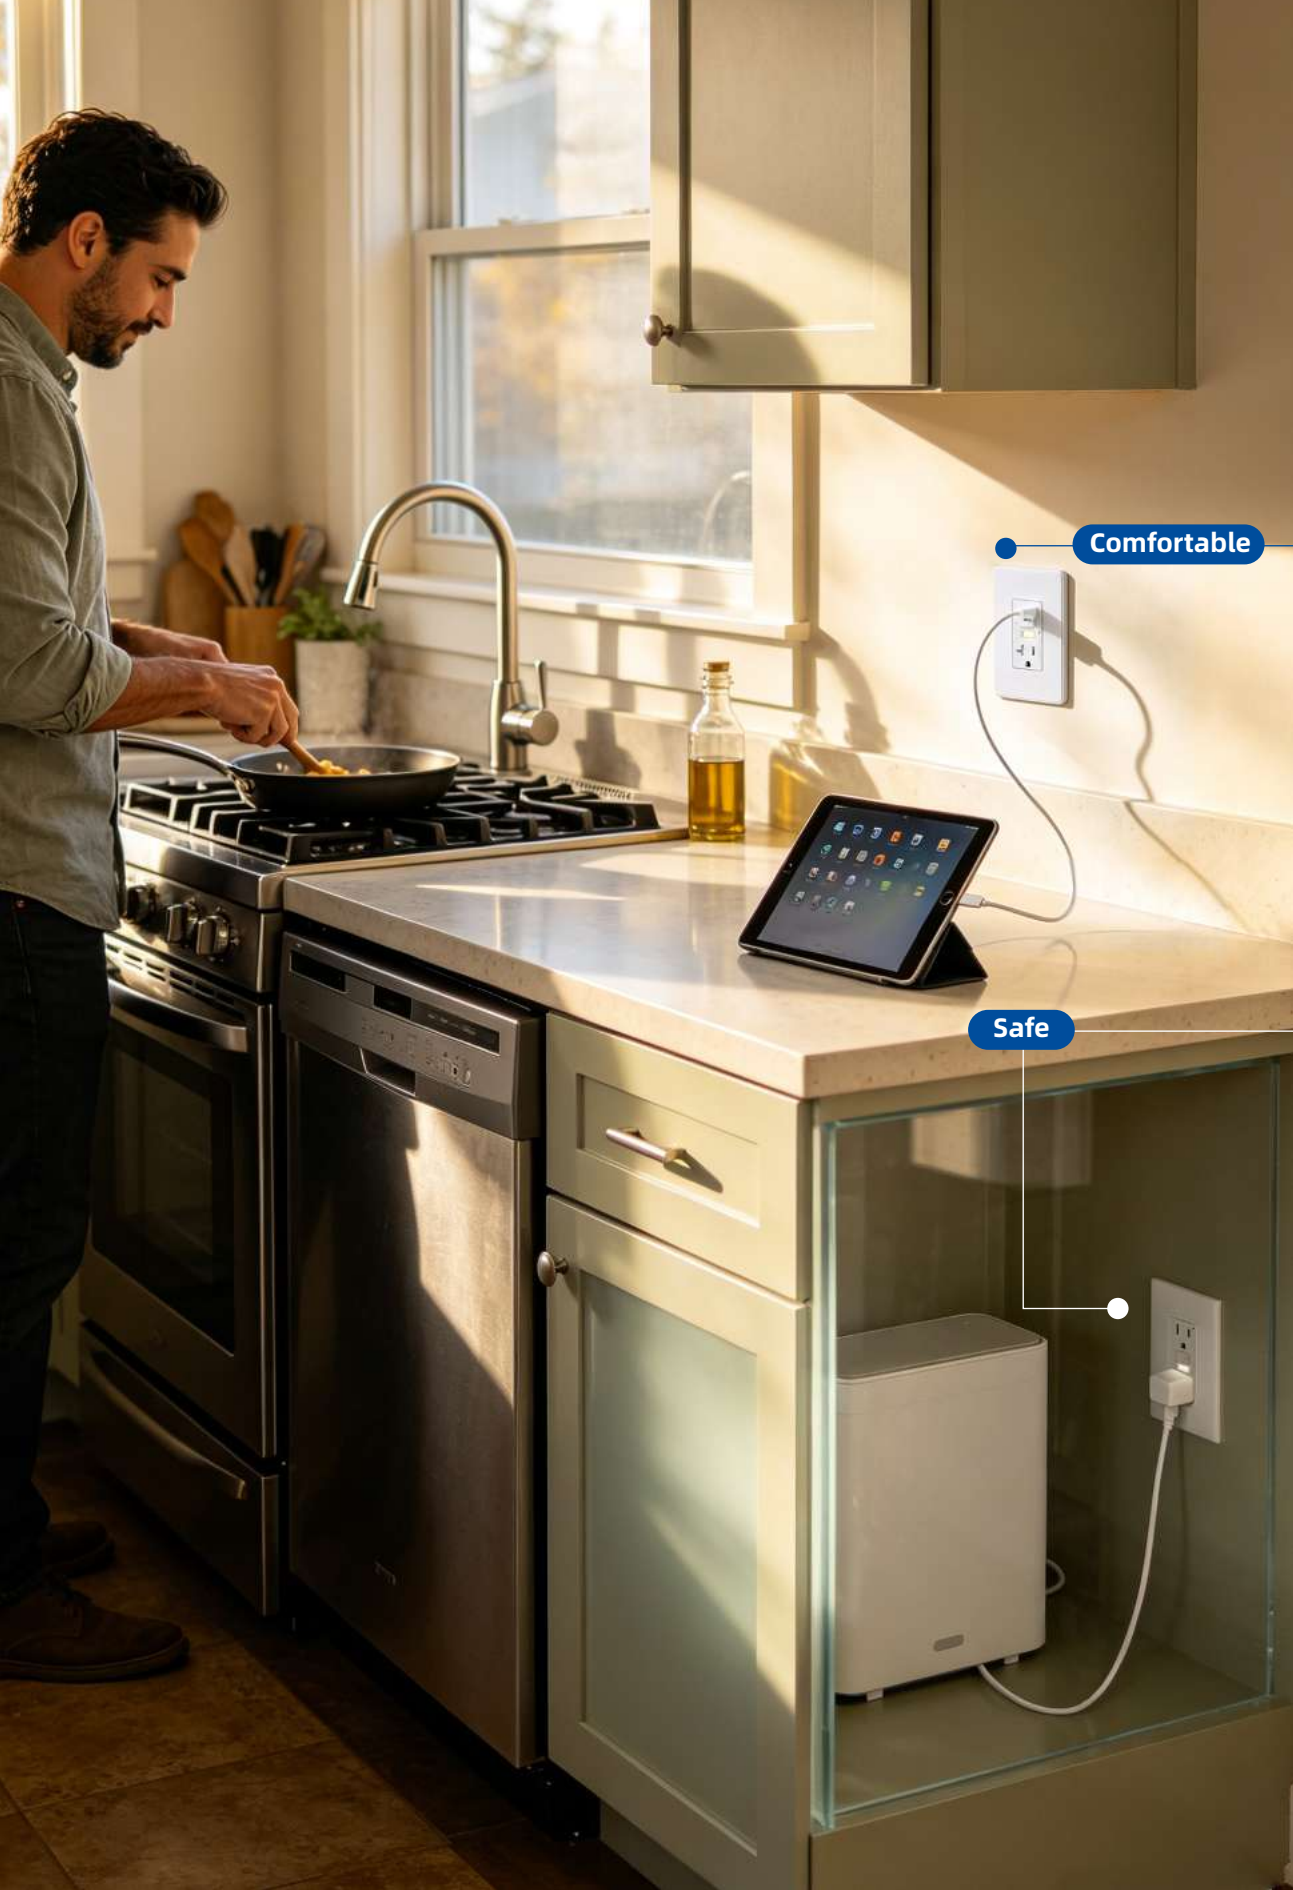

Two USB-C ports deliver up to 65W of fast charging, powering your phone and laptop simultaneously.

## Convenient

# Kitchen

**Pain Point**

Cooking with a recipe on your tablet but running low on battery? Tired of searching for a charger and giving up an outlet just to power your device? Charge it directly from the built in USB ports while GFCI protection keeps your kitchen safe. Safety meets convenience.

**Solution**

**GFCI combo with USB Ports**

Combining advanced GFCI protection with USB charging and a built-in night light, offering safety, convenience, and everyday comfort in one device.

**Pain Point**

High frequency equipment can cause unwanted GFCI trips and interrupt your power. HF GFCI is designed to handle high frequency interference, helping reduce nuisance tripping and provide more reliable protection for demanding applications.

**Solution**

**HF GFCI Outlet**

Meets the latest UL 943 requirements. High-frequency GFCI helps minimize nuisance tripping, supporting the reliable operation of modern appliances.

# Bathroom

 **Pain Point**

Still turning your bathroom fan on and off manually? Forget to turn it on and excess moisture can build up. Upgrade to a humidity sensor and fan control switch that detects rising humidity and automatically activates the fan, helping keep your bathroom fresh and comfortable.

 **Solution**

**Humidity Sensor and Fan Control Switch**

The Humidity Sensor Switch automatically detects rising humidity and activates the fan to help reduce excess moisture and keep your bathroom fresh and dry.
